

## PIUG 2021 Annual Conference Workshop

Title: **Orbit BioSequence and the many uses of combinations**

Time and location:

Monday, May 24: 10:15am – 11:15am; Socio Virtual Conference App

Abstract:

We will show the numerous ways Orbit BioSequence can combine patent sequence searching and other types of patent searches. From mixing chemistry and sequences to discovering important keywords via analysis. We will also show a glimpse of future developments.

---

Presenters:

**Denis Bayada**, Questel

Background:

Denis Bayada has worked in patents in sequences for over 18 years where he has developed software and helped customers understand complex sequence in patent problems in a variety of domains such as plant research, biotechnology and pharmaceuticals.

Denis completed a PhD in chemo-informatics in 1995. While working for pharmaceutical companies on drug discovery, Denis moved to bioinformatics where he worked on the early human genomes. This led him to do research in a public laboratory on metagenomics analysis.
